**MUCH**

The Malmö University-Chalmers Corpus of Writing as a Process

---

**Purposes**

To build a *drafts corpus* to facilitate the study of writing processes from different perspectives; to study features, such as feedback, argumentation techniques and rhetorical structures; and to use the corpus for the teaching of academic writing.

---

**Our contribution**

The MUCH corpus:

- includes multiple drafts of student texts
- tags both writing and feedback processes
- tags both rhetorical and linguistic structures
- brings together composition studies, EFL studies and corpus linguistics

---

**Challenges**

The *unique design* presents several challenges, for example:

- How do we structure and format the corpus to fit current archiving standards?
- What kind of metadata should be included?
- What kind of interface best serves the researcher and user community?
- To what extent can existing tagging systems be used, and what new tags need to be devised for our material?

---

**The corpus**

Pilot version of 500,000 words made up of three drafts of:

- 400 student texts
- 50 PhD student texts
- Peer and teacher comments
- Self-reflective comments

Complete corpus: approximately 1.2 million words

---

**Tagging a feedback sequence**

1. First draft, PhD student
   Long chain n-3 poly-saturated fatty acids (LC n-3 PUFA), especially EPA and DHA found in...

2. Comments from two PhD students
   A: “I think it is better to define them.”
   B: “Are these known by your readers?”

3. Revised draft (changes underlined)
   Long chain n-3 polysaturated fatty acids (LC n-3 PUFA), especially EPA (eicosapentaenoic acid) and DHA (docosapentaenoic acid) found in...
